## Table of Contents

- Introduction to AWS
- Identity and Access Management in AWS
- Amazon EC2
- AWS Storage Options
- Networking using AWS
- Load Balancing, Auto Scaling, and Routing using AWS
- AWS Database Services
- Security Management in AWS
- Monitoring Resources and Governance in AWS
- Application Services, Serverless Computing and Provisioning Infrastructure
- Cloud Analytics and Cost Management on AWS
- AWS Architectural Designs – I
- AWS Architectural Designs – II (Self-paced)
- Migrating to Cloud (Self-paced)
- Containers in AWS (Self-paced)
- AWS Machine Learning (Self-paced)

### Skills Covered

- Designing Identity Solutions
- Managing Security
- Designing Data Storage Solutions
- Monitoring Cloud Solutions
- Designing Resilient AWS Solutions
- AWS Cloud Cost Optimization

### Tools Covered

## Project

### Industry: E-commerce

**Problem Statement:** A start-up company wants to host its Python and React-based application (Backend: Python API and Frontend: React) using AWS. But they are not familiar with the AWS cloud platform. They want to ensure that the application is secure, scalable, highly available and cost-efficient. As a solutions architect, you have to design a proper solution to meet their requirements.

**Goal:** To architect a solution that is secure, scalable, highly available and cost-effective using AWS.

### Industry: IT

**Problem Statement:** You are recently promoted from a Cloud Engineer to a Cloud Architect and assigned a project to prepare a new environment in the cloud, to which your team will later migrate their applications.

**Goal:** To architect a solution that is secure, scalable, and highly available  
And cost-effective using AWS.
